SUMMARY

M.Sc. Computer Applications & IT graduate with a strong background in Mathematics and practical experience in AI/ML development. Completed a 3-month internship building classical ML pipelines and LangChain-based RAG solutions. Independently built an end-to-end 7-agent LLM screening and interview system using Llama 3.3 and FastAPI. Looking to contribute hands-on skills in Python development and AI workflows to an innovative engineering team.

TECHNICAL SKILLS

- Languages:** Python, SQL, HTML, CSS
- ML & Data:** NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn
- GenAI / LLM:** LangChain, Retrieval-Augmented Generation (RAG), Prompt Engineering, Pydantic (Structured Outputs), FAISS (Vector Search), Groq LLM API (Llama 3.3 70B)
- Backend & Frameworks:** FastAPI, Django (basic), REST API Design
- Databases:** MySQL, Firebase / Firestore
- Tools & Platforms:** Git, GitHub, VS Code, Google Colab, Docker (basic), Vercel / Render

EXPERIENCE

AI/ML Developer Intern | IBOON Technologies Apr 2026 – Jul 2026

- Built and rigorously evaluated classical Machine Learning models (Linear Regression, Logistic Regression, KNN, Random Forest) across 7 real-world datasets covering comprehensive EDA, feature engineering, and hyperparameter tuning.
- Evaluated distinct baseline metrics including Accuracy, F1-Score, RMSE, and R^2 to isolate optimal predictive models unique to tabular datasets.
- Developed robust Retrieval-Augmented Generation (RAG) pipelines inside LangChain using PromptTemplates, Document Loaders, and specialized Text Splitters for seamless enterprise document Q&A.
- Implemented efficient semantic data lookups using Gemini embeddings combined with a localized FAISS vector database to expedite relevant document context retrieval.

PROJECTS

AI Multi-Agent Candidate Screening & Interview Assistant | [\[GitHub link\]](#) Jul 2026 – Present

Self Project | Tech Stack: Python, LangChain, FastAPI, Groq (Llama 3.3 70B), Pydantic, FAISS, PyPDF

- Architected** an end-to-end autonomous recruiting system featuring **7 specialized agents** to orchestrate seamless resume screening and interactive candidate evaluation.
- Implemented** strict attribute extraction using **Pydantic Structured Outputs** to convert unstructured resumes and Job Descriptions into clean, standardized JSON schemas.
- Engineered** a decision pipeline where a dedicated Evaluation Agent logically matches extracted schemas, passing structured insights to a Planner Agent to decide interview progression.
- Developed** a dynamic interviewing bot that generates contextual, real-time questions targeting the specific skills and project authenticity listed in the candidate's resume.
- Deployed** the backend using **FastAPI** for handling asynchronous multi-agent orchestration, reducing manual profile filtering time significantly
- Designed** a definitive dashboard output delivering a verified 'Top 10' candidate recommendation pool to enterprise HR panels for final-stage technical onboarding.

eLearning Platform (Web Application) | [\[live demo link\]](#) Aug 2025 – Nov 2025

Team Project - Backend Developer & UI Designer

- Built a full-stack eLearning platform with Firebase Authentication and Firestore database for course and user management.
- Designed the UI in Figma and deployed the frontend; collaborated with a team through the full development cycle.

EDUCATION

Master of Science — Computer Applications & IT | Ganpat University, Mehsana 2024 – 2026

CGPA: 6.68 | Relevant Coursework : Python, Machine Learning, SQL

Bachelor of Science — Mathematics | Grow More College, Himmatnagar 2021 – 2024

CGPA - 6.94
